Model Predictive Control Toolbox™ Release Notes

© COPYRIGHT 2005–2015 by The MathWorks, Inc.

The software described in this document is furnished under a license agreement. The software may be used or copied only under the terms of the license agreement. No part of this manual may be photocopied or reproduced in any form without prior written consent from The MathWorks, Inc.

FEDERAL ACQUISITION: This provision applies to all acquisitions of the Program and Documentation by, for, or through the federal government of the United States. By accepting delivery of the Program or Documentation, the government hereby agrees that this software or documentation qualifies as commercial computer software or commercial computer software documentation as such terms are used or defined in FAR 12.212, DFARS Part 227.72, and DFARS 252.227-7014. Accordingly, the terms and conditions of this Agreement and only those rights specified in this Agreement, shall pertain to and govern the use, modification, reproduction, release, performance, display, and disclosure of the Program and Documentation by the federal government (or other entity acquiring for or through the federal government) and shall supersede any conflicting contractual terms or conditions. If this License fails to meet the government's needs or is inconsistent in any respect with federal procurement law, the government agrees to return the Program and Documentation, unused, to The MathWorks, Inc.

Trademarks

MATLAB and Simulink are registered trademarks of The MathWorks, Inc. See [rademarks](#) for a list of additional trademarks. Other product or brand names may be trademarks or registered trademarks of their respective holders.

Patents

MathWorks products are protected by one or more U.S. patents. Please see [atents](#) for more information.

R2015a

OutputVariables Integrator property of MPC controller being removed	1-2
setoutdist command 'remove' syntax being removed	1-2
Functionality being removed or changed	1-4

R2014b

Explicit MPC control for applications with fast sample times using precomputed solutions	2-2
Adaptive MPC control through run-time changes to internal plant model	2-2
ScaleFactor property for MPC controllers, for making weight tuning independent of the engineering units of input and output variables	2-3
Option to use custom state estimation or measured state values instead of the built-in state estimation in MPC controllers	2-3
Option to specify manipulated variable target	2-3
Run-time weight tuning on manipulated variables	2-4

Run-time weight tuning and performance monitoring in Multiple MPC Controllers block	2-4
getEstimator and setEstimator commands to obtain and change state estimation parameters	2-4
Definition of external MV signal changed	2-5
Unconnected input and output limits inports default changed to match mpc object	2-5

R2014a

IEC 61131-3 Structured Text generation from MPC Controller and Multiple MPC Controllers blocks using Simulink PLC Coder	3-2
Reduced RAM usage for C code generated for MPC Controller and Multiple MPC Controllers blocks	3-2
Estimate of data memory size used by deployed MPC controller at run time	3-2

R2013b

Controller design for plant and disturbance models with internal delays	4-2
Single-precision simulation and code generation using MPC Controller and Multiple MPC Controllers blocks	4-2
Conditional execution of MPC Controller and Multiple MPC Controllers blocks using Function-Call Subsystem and Triggered Subsystem blocks	4-3
